Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior (Du, Buzasaki, Gadol) does not teach, *An automated method for processing a workflow among a plurality of activity servers, the method comprising, at each activity server among the plurality of activity servers, the steps of: obtaining workflow transition information from a common database, the workflow transition information defining a sequence of a plurality of activities for a workflow; retrieving a workflow packet from a workflow queue maintained in the common database, the workflow packet corresponding to an activity defined in the sequence of activities for the workflow; performing the activity corresponding to the retrieved workflow packet; determining a next activity in the sequence of activities for the workflow from the workflow transition information; wherein the next activity is capable of being performed by the activity server, performing the next activity without requesting a next workflow packet from the workflow queue; and wherein the next activity is incapable of being performed by the activity server, forming the next workflow packet corresponding to the next activity and forwarding the next workflow packet to the workflow queue for retrieval by another activity server capable of performing the next activity.*

In particular, *wherein the next activity is incapable of being performed by the activity server, forming the next workflow packet corresponding to the next activity and forwarding the next workflow packet to the workflow queue for retrieval by another activity server capable of performing the next activity,* the prior art teaches pre-allocated individual task defined in a workflow queue, a particular client is assign a

stage in the processing of the workflow. When an activity in a workflow is completed by a particular person/server, the workflow is then forwarded to the next person/server for processing.

In the claims, when a server determines that it can not perform the next activity in the workflow, the workflow packet is forwarded to the workflow queue and retrieved by a server that can perform the next activity. This is novel over the prior art since the server is accessing the workflow queue for activities it can perform as opposed to the prior art of assignment of activities to a particular client/server and forwarding directly to the client/server.

NOTE: Claims 42, 45-55, 57, 59-67, 81, 83 is deemed to be statutory because the method of processing the workflow is being performed by the activity servers in which activity servers contains hardware, e.g. harddrive, RAM, ROM, computer processors, para.0069 of the specification.

Claims 69, 72-80, 85, recites, a computer-readable medium and also activity servers to perform the processing of workflow. Para.0069 of the specification, recites the use of data storage, e.g. harddrive, RAM, ROM, computer processors, in which one ordinary skill in the art would consider to be computer-readable medium, therefore deemed statutory.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
